# SuperDerivatives Voted “Best Data Provider for Derivatives” at Inside Market Data Awards 2007

Press Release: London and New York, 3 May 2007

SuperDerivatives®, the benchmark for options and the world's leading derivatives solution provider for multi-asset option pricing, independent revaluation, trading and risk management systems, has been voted the “**Best Data Provider for Derivatives**” by financial institutions and corporations the world over as a part of the Inside Market Data Awards 2007.

Other candidates included Bloomberg, Reuters, DTN, Townsend Analytics, Markit, Future Source, GL Trade and Track Data. The award winners were announced at a special dinner hosted by Incisive Media's Inside Market Data in New York on May 2, 2007. Established in 1986, London and New York based Inside Market Data is a newsletter dedicated to the financial market data business.

SuperDerivatives provides highly accurate real-time and historical derivatives data as part of its interactive web-based applications and as dedicated data feeds for use in 3rd party risk management systems. The data's accuracy and breadth has led SuperDerivatives to be widely recognized as the benchmark for **MiFID Best Execution** for hard-to-value OTC options.

“We congratulate SuperDerivatives on winning the derivatives data vendor category in our 2007 awards. With derivatives taking center stage in global capital markets, this new category is set to grow in importance and popularity. Inside Market Data and Inside Reference Data readers voted SuperDerivatives the winner ahead of stiff competition from a range of highly respected companies. We are gratified by the high levels of voting from our global readership, and we feel that this provides the best representation of end-user satisfaction,” said Max Bowie, Editor, Inside Market Data.

Risk managers, controllers, and middle and back office professionals can obtain snapshots and feeds of SuperDerivatives market data for use within internal or third party risk management systems. This includes volatility surfaces, term structures yield and forward curves, correlation data and implied dividend forecasts. All are produced using the SuperDerivatives **benchmark option pricing model** in conjunction with quality, validated rates from the company's global contributor network of brokers, exchanges and market-makers. Coverage spans **all asset classes** – currencies, interest rates, credit, equity, commodities and energy - across developed and emerging countries, exchange and OTC markets. Data files are accessible via the company's **Revaluation Center** 'Derivatives Data Portal', or automatically over Web Services Application Programming Interface (**API**) or using any market-standard format and protocol.

“We would like to thank all our clients for their ongoing support and feedback. SuperDerivatives is as committed as ever to continue enhancing the quality and relevancy of its derivatives market data. More and more companies are using our **Derivatives Data Portal** and real-time data feed for risk management control and compliance with MiFID Best Execution and other emerging standards,” said Bonnie Eshel, Head of Market Data, SuperDerivatives.
